Daniel Vartanian

{tesesusp}: a Quarto format for USP theses and dissertations

Original version

[DISSERTATION/THESIS] presented to the [SCHOOL/DEPARTMENT] at the University of São Paulo, as part of the requirements for the degree of [TYPE OF DEGREE] by the [GRADUATE PROGRAM].

Area of Con.: [AREA OF CONCENTRATION].

Revised version incorporating the changes requested by the examining committee on [DATE]. The original version is held in the reserved collection at the [SCHOOL/DEPARTMENT] Library and in the Digital Library of Theses and Dissertations of the University of São Paulo (BDTD-USP), in accordance with [Resolution CoPGr 6018, dated October 13, 2011](#).

Supervisor: Prof. Dr. [SUPERVISOR'S FULL NAME]

Co-Supervisor: Prof. Dr. [CO-SUPERVISOR'S FULL NAME]

São Paulo

2023

Ficha catalográfica

ERRATA

This is the development version of the thesis (version <1.0.0). Any necessary corrections will be listed here after its approval.

[TYPE OF WORK] by [AUTHOR'S FULL NAME], under the title **{tesesusp}: a Quarto format for USP theses and dissertations**, presented to the [SCHOOL/DEPARTMENT] at the University of São Paulo, as part of the requirements for the degree of [TYPE OF DEGREE] by the [GRADUATE PRGRAM]), in the concentration area of [CONCENTRATION AREA].

LIST OF FIGURES

Figure 1 – Karl Popper (July 25, 1902 – September 17, 1994). One of the 20th century's most influential philosophers of science.	18
Figure 2 – Relations between waiting time to next eruption (in minutes) and eruption time (in minutes) for the Old Faithful geyser in Yellowstone National Park, Wyoming, USA.	19

LIST OF TABLES

Table 1 – A sample of the famous (Fisher’s or Anderson’s) iris data set	18
---	----

LIST OF ABBREVIATIONS AND ACRONYMS

F

Subscript indicating a relation with work-free days

W

Subscript indicating a relation with workdays

MCTQ

Munich ChronoType Questionnaire

MCTQ^{PT}

Portuguese version of the MCTQ

MEQ

Morningness-Eveningness Questionnaire

MSF

Local time of mid-sleep on work-free days

MSF_{sc}

Chronotype proxy. The midpoint between sleep onset and sleep end on work-free days. A sleep correction (_{sc}) is made when a possible sleep compensation related to a lack of sleep on workdays is identified.

MSW

Local time of mid-sleep on workdays

LIST OF SYMBOLS

For an extensive list of chronobiology related symbols, please refer to Aschoff et al. (1965) and Marques & Oda (2012).

τ

Period of a rhythm in free flow; only revealed under constant environmental conditions.

T

Zeitgeber period.

ϕ

Phase

$\Delta\phi$

Phase shift

$+\Delta\phi$

Phase advance

$-\Delta\phi$

Phase delay

Ψ

Phase relation

LIST OF TERMS AND DEFINITIONS

For an extensive list of chronobiology related terms and definitions, please refer to Aschoff et al. (1965) and Marques & Oda (2012).

Chronotype

Any kind of temporal phenotype (Ehret, 1974; Pittendrigh, 1993). Usually, it refers to circadian phenotypes in a spectrum that goes from morningness to eveningness (Horne & Ostberg, 1976; Roenneberg et al., 2003). It can also be seen as an organism's phase of entrainment (Roenneberg et al., 2012).

Circadian rhythm

A rhythm with a period close to a day/24h, an approximation to the period of the earth's rotation (Pittendrigh, 1960). From the Latin *circā*, around, and *dies*, day (Latinitium, n.d.). Example: the sleep-wake cycle.

Complex system

There are several definitions. Here are some that I found to be of use:

- “Systems that don't yield to compact forms of representation or description” (David Krakauer apud Mitchell, 2013)
- “A system of many interacting parts where the system is more than just the sum of its parts” (Mark Newman apud Mitchell, 2013)
- Systems with many connected agents that interact and exhibit self-organization and emergence behavior, all without the need for a central controller (adapted from Camilo Rodrigues Neto's definition, supervisor of this thesis).
- Dialectics at its finest (my working definition).

Entrainment

A shift and alignment of biological rhythms induced by a zeitgeber input (Kuhlman et al., 2018). For example: a shift/alignment of an organism's circadian rhythm when exposed to light.

Infradian rhythm

A rhythm with a period greater than a day/24h. From the Latin *infra*, below (think in terms of period repetition), and *dies*, day (Latinitium, n.d.). Example: the menstrual cycle.

Period

Cycle duration of an oscillation. In a more technical way, the duration between two identical and consecutive phases in an oscillation (Kuhlman et al., 2018).

System theory

Two definitions can be of use:

- Science or discipline that investigates models, principles, and laws that are valid to systems in general (Bertalanffy, 1968)
- “The attempt of a reductionist scientific tradition to come to terms with complexity, nonlinearity, and change through sophisticated mathematical and computational techniques, *a groping toward a more dialectical understanding* that is held back by its philosophical biases and the institutional and economic contexts of its development” (Levins, 1998)

Ultradian rhythm

A rhythm with a period below a day/24h. From the Latin *ultra*, beyond (think in terms of period repetition), and *dies*, day (Latinitium, n.d.). Example: the cardiac cycle.

Zeitgeber

Any periodic environmental signal/cue that can influence or regulate biological rhythms. From the German *zeit*, time, and *geber*, donor (Cambridge University Press, n.d.). Two main well known zeitgebers are light exposure and environment temperature (Pittendrigh, 1960).

“The activity can be represented by a *general schema of problem-solving by the method of imaginative conjectures and criticism*, or, as I have often called it, by the *method of conjecture and refutation*. The schema (in its simplest form) is this

$$P_1 \rightarrow TT \rightarrow EE \rightarrow P_2$$

Here P_1 is the *problem* from which we start, TT (the ‘tentative theory’) is the imaginative conjectural solution which we first reach, for example our first *tentative interpretation*. EE (‘*error- elimination*’) consists of a severe critical examination of our conjecture, our tentative interpretation: it consists, for example, of the critical use of documentary evidence and, if we have at this early stage more than one conjecture at our disposal, it will also consist of a critical discussion and comparative evaluation of the competing conjectures. P_2 is the problem situation as it emerges from our first critical attempt to solve our problems. It leads up to our second attempt (*and so on*). A satisfactory understanding will be reached if the interpretation, the conjectural theory, finds support in the fact that it can throw new light on new problems — on more problems than we expected; or if it finds support in the fact that it explains many sub-problems, some of which were not seen to start with. Thus we may say that we can gauge the progress we have made by comparing P_1 with some of our later problems (P_n , say).”

(Popper 1979, 164)

Figure 1 – Karl Popper (July 25, 1902 – September 17, 1994).
One of the 20th century's most influential philosophers of science.
