LIST OF FIGURES

Figure 1 –	Relations between waiting time to next eruption (in minutes) and	
	eruption time (in minutes) for the Old Faithful geyser in Yellowstone	
	National Park, Wyoming, USA	18

LIST OF TABLES

Table 1 – A	A sample of the f	amous (Fisher's d	or Anderson's) ir	is data set	17

LIST OF ABBREVIATIONS AND ACRONYMS

F

Subscript indicating a relation with work-free days

W

Subscript indicating a relation with workdays

MCTQ

Munich ChronoType Questionnaire

MCTQ^{PT}

Portuguese version of the MCTQ

MEQ

Morningness-Eveningness Questionnaire

MSF

Local time of mid-sleep on work-free days

$\mathsf{MSF}_{\mathsf{sc}}$

Chronotype proxy. The midpoint between sleep onset and sleep end on work-free days. A sleep correction ($_{SC}$) is made when a possible sleep compensation related to a lack of sleep on workdays is identified.

MSW

Local time of mid-sleep on workdays

LIST OF SYMBOLS

For an extensive list of chronobiology related symbols, please refer to Aschoff et al. (1965) and Marques & Oda (2012). τ Period of a rhythm in free flow; only revealed under constant environmental conditions. TZeitgeber period. ϕ Phase $\Delta \phi$ Phase shift $+\Delta\phi$ Phase advance $-\Delta\phi$ Phase delay Ψ

Phase relation

LIST OF TERMS AND DEFINITIONS

For an extensive list of chronobiology related terms and definitions, please refer to Aschoff et al. (1965) and Marques & Oda (2012).

Chronotype

Any kind of temporal phenotype (Ehret, 1974; Pittendrigh, 1993). Usually, it refers to circadian phenotypes in a spectrum that goes from morningness to eveningness (Horne & Ostberg, 1976; Roenneberg et al., 2003). It can also be seen as an organism's phase of entrainment (Roenneberg et al., 2012).

Circadian rhythm

A rhythm with a period close to a day/24h, an approximation to the period of the earth's rotation (Pittendrigh, 1960). From the Latin *circā*, around, and *dĭes*, day (Latinitium, n.d.). Example: the sleep-wake cycle.

Complex system

There are several definitions. Here are some that I found to be of use:

- "Systems that don't yield to compact forms of representation or description" (David Krakauer apud Mitchell, 2013)
- "A system of many interacting parts where the system is more than just the sum of its parts" (Mark Newman apud Mitchell, 2013)
- Systems with many connected agents that interact and exhibit self-organization and emergence behavior, all without the need for a central controller (adapted from Camilo Rodrigues Neto's definition, supervisor of this thesis).
- Dialectics at its finest (my working definition).

Entrainment

A shift and alignment of biological rhythms induced by a zeitgeber input (Kuhlman et al., 2018). For example: a shift/alignment of an organism's circadian rhythm when exposed to light.

=latex \vspace{1em}

"The activity can be represented by a *general schema of problem-solving by the method of imaginative conjectures and criticism*, or, as I have often called it, by *the method of conjecture and refutation*. The schema (in its simplest form) is this

$$P_1 \rightarrow TT \rightarrow EE \rightarrow P_2$$

Here P_1 is the *problem* from which we start, TT (the 'tentative theory') is the imaginative conjectural solution which we first reach, for example our first *tentative interpretation*. EE ('*error- elimination*') consists of a severe critical examination of our conjecture, our tentative interpretation: it consists, for example, of the critical use of documentary evidence and, if we have at this early stage more than one conjecture at our disposal, it will also consist of a critical discussion and comparative evaluation of the competing conjectures. P_2 is the problem situation as it emerges from our first critical attempt to solve our problems. It leads up to our second attempt (*and so on*). A satisfactory understanding will be reached if the interpretation, the conjectural theory, finds support in the fact that it can throw new light on new problems — on more problems than we expected; or if it finds support in the fact that it explains many sub-problems, some of which were not seen to start with. Thus we may say that we can gauge the progress we have made by comparing P_1 with some of our later problems (P_n , say)."

(POPPER, 1979, p. 164)
